Bros. Capture Manheim Two Top Beef Awards

by Everett Newswanger
Staff Reporter

Barry and Michael Longenecker formed a brother team that showed both the grand champion and reserve grand-champion steers at the Manheim Farm Show Baby Beef Judging held at the Manheim Central Junior High School, Wednesday evening

Fourteen-year-old Barry had the first place Angus steer which Judge Gerald Hess, Assistant Northampton County Agent called thick and trim enough to take the top show award.

Michael, thirteen years old, repeated his achievement of last year when the reserve grand champion ribbon was placed on his top Hereford of the Show.

These Manheim Central Junior High School eighth graders are sons of Mr. and Mrs Carl Longenecker, Lititz R2

Robert Hosler, Manheim R4, topped the Shorthorn class with an Angus-Shorthorn crossbred, and a little later in the evening Robert maneuvered his chunky, black baby beef so well that he was given the best showmanship award for youths having more than three years experience

In the class for showman with three years or less practice, Barry Longenecker emerged as the winner

The best fitted animal of

Former Miss Manheim 1st Runner-up In NEPPCO Poultry Princess Pageant

The highlight of the Annual Banquet of the Northeastern Poultry Producers Council (NEPPCO) last Wednesday night was the contest to select the 1965 NEPPCO Poultry Princess

The competition among the eight lovely contestants was so keen that the judges made the unprecedented request that the girls parade individually down the runway a second time

Following a suspense-filled fifteen minutes in which the judges huddled to reach a verdict, and each member of the audience of approximately 350 industry people discussed his personal choice with his neighbor, Milton Dunk, Editor of Poultry Tribune and Master of Ceremonies for the Pageant, reassembled the contestants on the stage to receive the judges' verdict.

Oscar Turner, poultryman from Maine and outgoing President of NEPPCO, opened each sealed envelope as it was handed to him Then the names of the winner of the Second Runner up, the First Runner-up, and finally, the new Poultry Princess, were announced by Dunk

The 1965 Poultry Princess is Miss Dona Detamore, 17-year old senior at Cambridge High School, Cambridge, Md Miss Detamore is the daughter of Mr and Mrs Otto B Hastings She has been active in 4-H Club work, and is interested in public speaking, horseback riding, modelling, cooking and sewing. In addition to receiving a $500 U.S. Savings Bond, she will receive one year of public appearances at agricultural affairs all over the Northeast

Dairy Judging At Manheim Show Closes Fair Season

On a chilly evening last Thursday at the Manheim Farm Show the Dairy Judging event represented the windup of the Fair circuit for another season

Judge David Dunbar, Associate Agent from Franklin County, worked his way quickly through the sparse Brown Swiss and Ayrshire classes, then more slowly through the larger Holstein class The crowd, spotty through the early part of the show, swelled to an estimated 300 after the traditional Farm Show Parade concluded

In the Brown Swiss Class Harold Brubaker, Mount Joy R1, had the Grand Champion and FFA Champion Gary Myer Lancaster, showed the 4-H Champion

The Grand Champion Ayrshire and 4 H Champion Ayrshire were shown by Glenn Stauffer

The Holstein Grand Champion was an aged cow named "Terry" that is owned jointly by Robert Kauffman, Elizabethtown R1, and Robert Hess, Strasburg R1

Winner of the 4-H Showmanship class was Harold Brubaker, and in the Fitting class it was Barbara Ann Kupp, Manheim R4

Winners in the other events are as follows for each breed

Brown Swiss· Senior yearling bull — Harold Brubaker, Intermediate calf — Paul N Brubaker, Senior calf — Paul N Brubaker, Senior yearling and FFA champion — Harold Brubaker, 4-H champion — Gary Myer; Junior champion and Senior yearling — Harold Brubaker; Two-year old — 1, Paul Brubaker; 2, Harold Brubaker, Aged cow — 1, Harold Brubaker, 2, Paul Brubaker, Produce of dam — Harold Brubaker, Best three females — Paul and Harold Brubaker

Ayrshire Senior calf— Barbara Ann Kupp, Two-year old

(Continued on Page 5)

Weather Forecast

Temperatures during the next five days are expected to average 2 to 7 degrees below the normal range of 67 in the afternoon and 46 at night.

Cooler over the weekend, slowly moderating next week. Rain late Monday and Tuesday which is expected to total more than .5 of an inch.

Crop Prices Off, But Livestock Prices Up

Despite the highest mid-September potato prices in 12 years, average prices received by Commonwealth farmers for all products dipped one per cent below those of a year earlier, according to the Pennsylvania Crop Reporting Service

Average prices also were one per cent below those of mid-August

Lower prices for fruits and vegetables were responsible for most of the decline Apples were down 10 cents a bushel from a month earlier and peaches were 15 cents a bushel lower

Potatoes were bringing the best September price since 1952, averaging $3 00 a hundredweight It was, however, $1 15 less per cwt than the mid-August price

Offsetting these declines were stronger prices for livestock and livestock products Hogs were up 60 cents per cwt, from mid-August Beef animals advanced 30 cents and calves 10 cents per cwt. during the month

Wholesale milk prices averaged $4 90 per cwt., three cents higher than a year earlier.

4-H Awards At Dairy Banquet

by Everett Newswanger
Staff Reporter

The annual 4-H Dairy Banquet is scheduled for Friday evening at Hostetters Banquet Hall, Mount Joy An attendance of over 200 is anticipated Following the dinner, merit awards are to be presented to the following outstanding 4-H club members for their outstanding accomplishments during the past year

Shipping Fever, Falltime Hazard

Each Fall as young cattle are moved from the range to the feedlot that old infectious disease commonly called "shipping fever" rears its ugly head

Although it is more closely associated with beef animals, dairymen too are sometimes plagued by it The disease is associated with Pasturella organisms, and scientists would prefer that it be called pasteurellosis This disease of many names has also been called "hemorrhagic septcemia"

Whatever you want to call it, it is a deadly and costly disease Anyone who has experienced shipping fever does not need to be reminded of its appearance It is an acute blood poisoning, characterized by a sudden onset of fever (106 to 107 degrees) Often

Weekly Broiler Report

Placements Increase

Placements of broiler chicks in the Keystone State by hatcherymen during the week ending October 3, totaled 751,000 according to the Pennsylvania Crop Reporting Service. This was an increase of 14 per cent over the previous week and 2 per cent above a year earlier. The 10-week total was 14 per cent above the comparable period a year ago. Settings for broiler chicks totaling 948,000 eggs were down 8 per cent from a week earlier but were 4 per cent above a year ago. The 3-week total was 1 per cent below last year. Inshipments of broiler-type chicks the past 10 weeks totaled 798,000 or 33 per cent above the comparable period last year. Outshipments of 1,226,000 were down 8 per cent.

Placements in the 22 major producing states totaled 37,077,000 chicks, 7 per cent above a week earlier and 8 per cent above last year The 10-week total was 6 per cent above a year ago Settings totaling 48,014,000 eggs were down 2 per cent from the previous week but 1 per cent over last year. The 3-week total was 4 per cent above a year earlier.

Eastern Pa. & N.J.

Supplies of light type hens less burdensome, particularly in N.J. where producers are holding birds for additional egg production. Processing demand generally fair. Offerings of heavy type hens light to adequate for a fair buying interest. Occasional lots of 5-6# hens moved at 10-12¢. Prices paid at farm 10/5-7 light type hens 5-7 mostly 6½-6¾¢ with prices at 5¢ reflecting small flocks in Pa. section; heavy type hens 14½-15¢; heavy type hen turkeys 22-22¾¢.

Fogelsville

(Prices for dock weights, ¢ per lb. except where noted)

Hens, light type, 6½-9½, mostly 7½-8; Hens, heavy type, 8-16½, m 10-14; Pullets, 15-28, m 20-26; Roasters, 12-27½, m 20-26, Ducks, 10-26, m 21-25; Drakes, 10-34, m 31-34; Turkeys, toms, 15 22½, m 18-20; Turkeys, hens, 25-27½, Rabbits, 12 26½, m 22-25½; Guineas, 42½-65, m 50-55; Pigeons (per pair), 50-80, m 50-60. Total coops sold: 1374.

4-H boys and girls participate in a wide variety of activities suitable to both city and country living.

Suicide is unnatural. It is the last thing a man would do

● Delmarva

Broilers and fryers — live prices continue to increase more than ½ cent.

Demand good for light auction offerings stimulated by progressive extension of pick up dates. Ready to cook demand mostly fair though good in instances where featured sales a factor. Very few plants operating Saturday. Delivery ¼ to ¾ higher on the lower side of range through competitive with other production areas.

Estimated slaughter for today and Saturday 747,000 head compared to 834,000 head last week. 37% sold at 16.0 to 16.4.

The Delmarva broiler-feed ratio for the week ending Oct 2, 1964 was 2.9. This represented a decline of 1 from last week Broilers averaged 14 74 cents per pound, and mash $102.20 per ton.

THE BEST WAY TO START A CALF

WIRTHMORE MILK MIZER

Its high fat content — 10% — means higher energy and fast growth.

Vitamin A content (10,000 units), provides disease resistance to scourn and resperatory infections.

New, powerful emulsifier (Propylene Glycal) allows faster dispersion and aids in fat absorption by the calf.

WIRTHMORE TWIN MIX CALF FEED

Twin-Mix is especially designed for feeding from the first week to 4-5 months of age. It is coarse and extremely palatable. Twin mix saves money by helping to develop the Rumen early allowing the calf to make maximum use of roughage.

It is fortified with vitamins and minerals to help give the good growth and body development that makes calves grow into better producing cows.

TRY IT ON THAT NEXT CALF.

From Where We Stand . . .

Know Your Faults

We've often heard it said that if a person would consistently show his good points, or "put his best foot forward," people would not be so likely to notice his faults. This seems to say, "don't worry about your faults, your good points will hide them." Is this really the way it works, or might there be another approach to the problem?

The parallel between posing dairy cattle in the show ring, and showing ourselves to others to our best advantage occurred to us recently when we read an article by the well-known cattle judges Dr. J. L. and John W. McKitrick in Hoard's Dairyman.

The McKitricks stressed several important points for showing cattle so as to offset their faults.

The most important single impression to convey is "balance." A well-balanced animal shows to best advantage. A well-balanced person also shows to best advantage. While we mean one thing when we talk about a balanced animal and something far more extensive when we talk about a well-balanced person, the feeling, or impression, is similar. We too are in the "show ring," only we are constantly being viewed by many "judges," and not just from one side at a time.

The McKitricks summarized their suggestions for showmanship by saying that "you don't have to worry about the good points of your animal; worry about her faults and try to show her out of them." Perhaps with the exception of temperament, the dairy animal is being judged on her physical traits. We, however, are judged by the people we meet more on the intangible traits of character and personality.

Everyone will probably agree that they have a fault or two. Few of us treasure these faults, or the idea that we have them, and we seldom thank anyone who calls them to our attention. But until we get them out into the open where we can thoroughly look them over, how can we see ourselves as others see us? And this is the acid test for "fault analysis;" how do we look through someone else's eyes?

We think the moral of this story is that it is necessary to know the faults of our animals and of ourselves. In the show ring we need to know our animal's faults so that we can show her to her best advantage. In life, we need to know our personal faults in order to correct them.

What Do YOU Think?

★ ★ ★ ★

According To The Almanac

We didn't get much work done the other day because The Old Farmer's Almanac — 1965 Edition — came in the mail.

Everybody reads the Farmer's Almanac. How else would they know such things as when the moon would be full a year in advance, what time the sun will rise each day, the tide table schedule, their horoscope for the rest of the year, and all such vital facts.

This little book probably contains more information, pound for pound, than the Encyclopedia Brittanica! For example, did you know:

that automation will eventually reduce the work week in factories to about 20 hours a week? (at that rate we know some farmers that pretty near have a week's work done by Tuesday morning);

that chemotherapy can reconstruct your whole personality?;

that it wasn't DDT contamination that drove the salmon from the rivers of New Brunswick as thought earlier? It now seems it was just all part of a 9.6 year cycle in salmon abundance;

that a Harvard professor says our space program is just a wild spree; he says there are no Martians, and that we could learn lots more by studying life on earth than we'll ever learn from our space explorations; (no Martians indeed! How does the good professor account for all those little green men that appear nightly on television we wonder?);

that weathermen, using information collected by the weather satellites orbiting overhead, are trying to predict weather months ahead (perhaps they will finally admit failure on day to day forecasting);

that when it rains on Election Day the Democrats usually win? (perhaps those were tears, not raindrops!);

that in 1963 some 7,200 claims were filed for damage resulting from jet planes breaking the sound barrier. Of these, 2,268 were paid and the bill amounted to $239,450 (that's probably more than all the breakage of dishes in kitchens all over the country);

that the animal called the Woodchuck got its name originally from New England when the early settlers noticed that when it is in a safe, comfortable place, and in good spirits, it would make a chuckling, laughing noise. They called it a Woodchuckle;

that some days are better for fishing than others — the Almanac lists the 28 most favorable days for 1965. They do suggest that even under the best conditions those who know how to fish will catch more fish than those who don't (guess we can't argue with that kind of logic);

that there is enough scientific information published in the world every 24 hours to fill seven, complete, 24-volume sets of the Encyclopedia Brittanica, or, keep one man reading around-the-clock every day for 460 years to cover the scientific output of one year (and you think our editorials are lengthy!).

Speaking of lengthy editorials, we'll stop right here. But these small bits of vital information we've given you are just a sample of what you can expect from the 1965 Old Farmers Almanac.

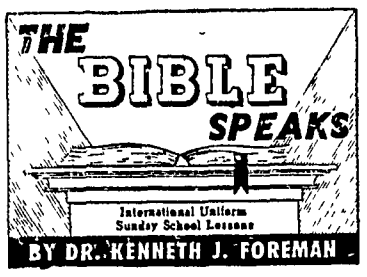
AUTUMN IS GOOD TIME TO LIME

With our agronomists telling us our farmlands need 80 million tons of agricultural limestone each year, anytime is a good time to apply this soil saver But the Fall of the year, when much of the busy Summer rush season work has been completed, is a very desirable time to satisfy your soil's liming requirements.

Many farmers tend to put off ordering their aglime past the Fall season, only to find that heavy snows during Winter and excessive rains in the Spring delay liming. Also, during the Spring rush, many farmers may not get their lime delivered prior to planting time due to a shortage of hauling and spreading equipment when suppliers normally have a few weeks. Applying limestone during the Fall permits a longer period for it to react within the soil's structure to neutralize the acidity, to release its calcium and magnesium for necessary crop growth, to influence the solubility of many soil compounds and to increase the activity of soil micro organisms. All will tend to greatly increase the overall fertility of the soil.

Millions of acres of pasture and cropland are not producing to their maximum efficiency and capacity, chiefly because their fertility is low or completely depleted. Correction of this problem by ordering and applying your aglime and fertilizer now will insure next year's high production. Once your soil's fertility problem is corrected, maintenance is an



Why Jesus Came

Lesson for October 11, 1964

Background Scripture: I Timothy 1:12 through 2:15.
Devotional Reading: John 10:7-18.

WHEN we ask the question Why? we can mean either one of two things by it. One "Why?" looks backward. the other forward. Imagine a straight line with an arrow at each end, one pointing right the other left. Let the straight line represent any event, let us say your grandfather's moving to Alaska. Now if I ask, "Why did your grandfather move to Alaska?" I can mean either: What was the cause of your grandfather's move? or, for what purpose did your grandfather move? Now, if we let that line stand for the coming of Jesus Christ to this world, "Why did Jesus come?" can mean What was the cause, What were the causes, or What was the purpose, What were the purposes? In this week's study we ask the second question. For what purpose did Jesus come?

Dr. Foreman

To save sinners

The first answer, which includes most others, is that Jesus came "to save sinners." Let's not skip over that as if we knew what it meant already. It suggests a great deal, and points up some of the differences between Christian and other religions. Some religions deny that man, any man, is a sinner. Communism, which is a kind of religion in reverse, gives up the notions of "right" and "wrong" for the simpler ideas of "correct" and "incorrect." Even if the words "good" and "bad" are used, they do not refer to God at all, for the communist recognizes no God. One may offend man but not God, they say. There are people who behave unpleasantly, but none who sin. For sin is a religious word, a word with God in the background.

To be a bridge

Another reason for which Jesus came—and comes every day—into this world, is to be a "Mediator." There is one mediator between God and men, Paul says,—himself man, Christ Jesus. The gulf between man and God seems too deep and too wide to be spanned. Man looked across and could see nothing but darkness and mystery. The Hebrews themselves, who knew much that is true about God, when they built a temple, left one room in it without a window and without even a place to set a lamp. This dark room was God's room, its darkness symbolizing man's ignorance of God. It was written in the Old Testament that God said, "No man shall see my face and live." The Apostle John in the New Testament speaks of God as one whom "no man has seen at any time"; and in this same letter to Timothy God is one whom "no man has seen nor can see." (I. Timothy 6 16` How terribly discouraging this is. Unless somehow this gulf of darkness is crossed, we are doomed to be forever separated from God.

To give himself

Jesus, we say, revealed God. He did this in words, in his teachings. By the way he talked about God, yes and the way he talked to God, Jesus opens for all who will look, windows into the character and purposes of God. But the unique and amazing thing about Jesus is that he not only gave us information,—the prophets had done that; he gave **himself.** He was not merely a wise man who told us much about God we did not know. He offered himself as a sacrifice, for our sakes. He is the Bridge; one who is not only a sharer of wisdom and truth, but one who shares our sorrows and even takes on himself the burdens and shame of our sins. He gave his wisdom, his time, his courage, his faith, his love; and in giving these things he was giving **himself.** Christ, in short, belongs to us.

Go To Church Sunday

Now Is The Time . . .

BY MAX SMITH

MAX SMITH

To Graze Hay Fields

Recent rainfall will promote growth of most pastures and legumes. Both alfalfa and red clover fields may be grazed until the snow flies with proper management. Animals should have some other dry matter before filling up on frosted legumes; also, it is not safe to permit animals to eat legumes with the frost on the plant; this may cause severe bloating. Even though we do not recommend that alfalfa be cut this time of year without a killing frost, it is advisable to graze the area as a pasture crop.

To Milk Cows Carefully

Individual attention and quality milk production should never be sacrificed for speed. Each cow is an individual and should be treated accordingly. Some cows milk fast while others milk out slow and it's difficult to change this fact. Treating all cows alike in milking time may injure delicate udder tissues. The improper use of the milking machine is a major source of mastitis.

To Do Forage Testing

The winter feeding season is approaching and many herd owners might save feed dollars by evaluating the quality of their hay and silage. The Penn State Forage Testing is a service ($5 00 per sample) to develop the grain feeding program based upon the kind of roughages being fed. The roughage is analyzed and a grain ration is recommended. Top quality roughages save dollars in less protein to purchase.

To Improve Calf Raising

Today's heifer calves will be in the milking herd in just a few years How well we grow them and develop them will have a lot to do with their size and their production potential Special care should be given in relation to warm, dry and draft-free pens and rations high in protein and vitamins Many calves are under-size at 12 months of age and cannot be expected to produce their maximum. Special plans for calf [illegible] are available.

[illegible] demand over a period of [illegible]

Cornerstone Laid For New Allied Mills Bulk Plant

At a ceremony held yesterday morning at the Lancaster-Hempfield Industrial Park, the cornerstone was laid for the first unit in the new industrial park.

The building now being constructed is due to be completed early in 1965 It is the first of two units to be built by Allied Mills, Inc., Chicago, Ill. It will serve as a distribution center for their bulk and packaged feeds, and will provide office space for clerical and administrative personnel.

Construction of the second unit is scheduled to begin next year. It will be a manufacturing plant where raw ingredients will be processed into "Wayne Feeds."

Executives from the main office of Allied Mills, Inc, included Thomas Graham, General Sales Manager, and John Richardson, Director of Public Relations They outlined their company's plans for the new structures and exchanged words of welcome with local officials

George W Davis, Jr, President of the Lancaster Chamber of Commerce, welcomed the Allied Mills Company to Lancaster

Other local dignitaries that were on hand for the occasion were G T Stoib, Vice-president Lancaster County Industrial Bureau, Benjamin Weaver, Chairman of County Commissioners; Benjamin F Gleider, Hempfield Township Supervisor, Ohmer F Gingrich, West Hampfield Township Supervisor; George B Coe, Mayor of Lancaster.

G. T Storb introduced Clifford L. Jones, Deputy Secretary of Commerce for Pennsylvania Jones delivered the principal remarks.

NEPPCO Board To Seek Quality Price Incentive

HARRISBURG, Pa — A recommendation to increase standards of egg quality and to provide price incentives for quality will be carried directly to the board of governors of the New York Mercantile Exchange by a NEPPCO committee

A committee appointed by the board of directors of the Northeastern Poultry Producers Council (NEPPCO) will make the proposal to officials of the Mercantile Exchange, where trading of eggs determines the prices received by poultrymen throughout the northeast

NEPPCO's board will ask Mercantile Exchange officials to have egg prices determined on the basis of quality and to increase quality requirements on wholesale packs of eggs to achieve uniformly high quality standards for the nation's consumers

The board also voted to grant a $1000 fellowship to the scientist in the 14-state NEPPCO area who prepares the best research report during the next two years on egg marketing. The winning report will be presented at the 13th World's Poultry Congress in Russia in 1966.

VALUE OF AGRICULTURAL EXPORTS

Agricultural exports from the United States in 1963 broke all records at $5.6 billion. They represented one-fourth of our total exports of goods and services and one-fifth of our total farm production, the U. S. Department of Agriculture reports These exports last year were enough to fill more than a million freight cars or 4,500 cargo ships.

FARM BUREAU

Preview of a Snug Winter

This is the time to get your home ready for winter. And Farm Bureau fuel oil trucks are ready to bring winter comfort to your front door.

You can depend on Farm Bureau Fuel Oil Service for quality fuel with each metered delivery. Servicing patrons on a planned basis eliminates any chance of your tank "running dry." OUR AUTOMATIC DELIVERY never lets you "out in the cold" Call us today! We promise your call will pay off in perfect comfort for you and your family—all winter long.

4 Easy Ways to Save Money—Save Fuel Oil

1. Have your heating system checked regularly to be sure you're getting the most efficient use of your fuel oil
2. Install storm windows and insulation to keep heat in . . . cold *out*.
3. Keep doors and windows closed, close off rooms not in use and draw shades at night
4. Keep room temperature at moderate level—turn thermostat down at night.

10 Minutes To Lunch!

By Mrs. Richard C. Spence

SPENCE

When time is short but appetites are healthy, jiffy meals help to keep you on schedule. Soups and quick go-withs are table bound in a matter of minutes. Even an unexpected guest or two won't make you panic if you use this menu: French Onion Soup, Make-Your-Own Sandwich Tray with a Variety of Breads, Meats, Cheeses, and Spreads; Macaroni Ring; Relishes; Honeydew and Cantaloupe Crescents; Beverage. Creamy Cheese-Macaroni Ring filled either with vegetables or fruit is perfect for a buffet table. The addition of shell macaroni not only contributes an interesting chewy texture to the mold, it also adds just enough "body" to keep it from collapsing. For security's sake, though, do place the ring on a chilled plate — better yet, place the plate on a bed of crushed ice.

CREAMY CHEESE-MACARONI RING

8 ounces small shell macaroni
1 envelope (1 tablespoons) unflavored gelatin
¼ cup cold water
2 ounces Blue cheese, crumbled
2 cups small curd cottage cheese
½ cup milk
¼ teaspoon salt
9 thin cucumber slices
Lettuce leaves
1 pint cherry tomatoes

Set out an 8-inch ring mold Cook macaroni in boiling, salted water until tender, yet firm, 10 to 12 minutes, drain Rinse with cold water and drain thoroughly. Meanwhile soften gelatin in water; dissolve over hot water. In large mixing bowl blend Blue cheese and cottage cheese. Stir in milk, gelatin, salt and macaroni. Rinse mold with cold water, then line with cucumber slices, cut side down Spoon cheese-macaroni mixture into mold Chill until firm, about 3 hours Unmold onto lettuce leaves. Fill center with cherry tomatoes.

Variation: To make fruit-filled ring, omit cucumber slices, then proceed as directed. Unmold on lettuce and fill center with seasonal fresh fruit.

* * *

Try these soups for lunch some day —

HERBED TOMATO SOUP

1 10½ ounce can condensed tomato soup
1 soup can water
¼ teaspoon oregano
¼ teaspoon marjoram leaves
¼ teaspoon basil leaves
⅛ teaspoon ground black pepper
1 tablespoon butter or margarine
Holland Rusks
Thick bologna slices
Slices of American process cheese

Mix soup, water, oregano, marjoram leaves, basil leaves, black pepper and butter or margarine. Heat, stirring occasionally until soup comes to a boil. Reduce heat and simmer 5 minutes. Makes 3 to 4 servings. As a go-with, top Holland Rusks with a thick slice of bologna, then with a slice of American process cheese. Heat in a moderate oven (350 degrees) about 10 minutes or until cheese is melted and bubbly. Serve immediately.

CHICKEN CORN CHOWDER

1 10½ ounce condensed cream of chicken soup
1 soup can milk
1 12-ounce can whole kernel corn, drained
Dash of ground black pepper

Combine all ingredients and heat, stirring occasionally. Makes 4 to 6 servings.

* * *

TUNA MUSHROOM SOUP

1 10½ ounce can condensed cream of mushroom soup
1 soup can milk
1 7-ounce can drained and flaked tuna
¼ teaspoon garlic powder
¼ teaspoon dry mustard
Dash of cayenne pepper
Dash of ground black pepper.

Mix all ingredients and heat, stirring occasionally. Serve with assorted crackers heaped with crabmeat salad Makes 3 to 4 servings.

POTATO CHEESE SOUP

1 10-½ ounce can condensed cream of potato soup
1 soup can milk
1 cup shredded Cheddar cheese
1 cup cooked green peas
Dash of ground black pepper.

Mix above ingredients and heat, stirring occasionally. Makes 3 to 4 servings. Serve with cheese and ham flavored crackers spread with deviled ham and garnished with slices of stuffed olives.

* *

Some sandwiches make lunch time extra special—

EGG AND JELLY CLUB SANDWICHES

4 hard-cooked eggs, chopped
¼ cup finely chopped onion
¼ cup finely chopped, pitted ripe olives
¼ cup mayonnaise or salad dressing
½ teaspoon salt
¼ teaspoon curry powder
⅓ cup currant jelly
¼ cup toasted, blanched, slivered almonds
12 slices white bread
Butter or margarine, softened
6 lettuce leaves

Blend together eggs, onion, olives, mayonnaise, salt and curry powder. In a separate bowl, combine jelly and almonds. Spread bread with butter or margarine Spread 6 white bread slices with egg

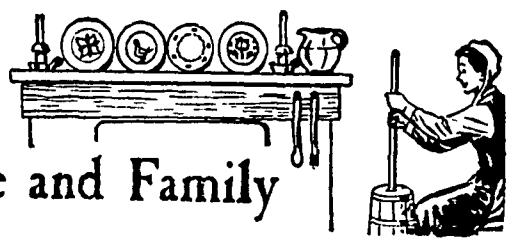
salad mixture and top with lettuce. Spread whole wheat bread slices with jelly mixture Place on lettuce-covered bread, jelly side up Cover with remaining slices of bread Secure with wooden picks and cut into halves or quarters.

WAFFLED BEEF-MUSHROOM SANDWICHES

- 18 slices sandwich bread
  Mayonnaise or salad dressing
- 24 slices smoked beef (about 3½ ounces)
- ½ cup sliced mushrooms (4 ounces, drained)
- 3 tablespoons grated Parmesan cheese
  Butter or margarine, melted

Preheat waffle baker to medium hot. Lightly spread bread with mayonnaise On each of 8 slices, place in following order: 3 slices smoked beef, several mushroom slices and 1 teaspoon cheese. Top with remaining bread slices Brush outside with butter or margarine Place on waffle baker and close cover gently, being careful not to close completely. Bake 1-2 minutes, or until golden brown Serve immediately.



For the Farm Wife and Family

Ladies, Have You Heard? . . .

By: Doris Thomas, Extension Home Economist

THOMAS

Ideas For A Housekeeping Schedule

Develop a flexible plan and it must be your own plan, not like your neighbor's or your friends If you schedule every minute, you'll be off-schedule before you know it You can estimate how long it will take to do some jobs, such as washing dishes and making beds, but you can't estimate jobs you do less often And you can't schedule the unexpected.

Divide big jobs into bite-size pieces For example, plan to clean the range or a cupboard instead of the entire kitchen at one time

Give jobs a priority. Decide which jobs you have to do, which you should do, and which you'd like to do Tackle jobs in that order and don't spend the day dreading something you can do in a few minutes Do it, and enjoy the rest of the activities on the day's calendar.

Be pleased and satisfied with what you do instead of disturbed by what remains to be done

Some Ways to Avoid Falls in Your Home

Stairs are not designed for storage — keep them free at all times If you have a basement stairs without a guardrail, spending a few dollars and a few hours work building a guardrail will be one of the best investments in safety you can make

When carrying loads up and down stairs, keep the loads small and carry them to the side so you can see each step. This may mean several trips, but will be worth the time and effort

Good lighting aids vision and means less danger of tripping Stairways especially need good lighting And be sure bedroom lights can be turned on without getting out of bed.

When climbing, use a sturdy stepladder never climb on a chair or a box

Avoid scatter rugs, but if

Horses Will Be Shown At H'bg.

For the first time in its 8-year history, the Pennsylvania Livestock Exposition, Nov. 9-14 in the State Farm Show Building, will include horses in the competitive classes, along with beef cattle, swine and sheep.

Harold R. McCulloch, manager, said the horses will be purebred Arabians, all of them breeding stock. Nineteen classes, including champions, will be sponsored by the Pennsylvania Arabian Horse Association, with six additional futurity classes under the sponsorship of the Arabian Horse Association of the East.

Mrs. Charles P. McGreary, Fairview, Erie county, said the Pennsylvania association, of which she is president, will have approximately 100 head. Mrs. Herbert Stuart, Mt. Holly, N. J., futurity secretary for the eastern group, indicated that colts and fillies to be entered in the futurity classes, may bring the total horse entries to near 150.

Dr. Thomas L. Merritt and Jesse Darlington, both of the Pennsylvania State University, will be superintendent and assistant, respectively, for the Arabian horse division.

The horses will be judged at 9 a.m. the opening day, Monday, November 9, in the large arena. They will appear again in demonstrations Monday and Tuesday nights as part of the entertainment program.

In addition to the Arabians, 250 horses will appear in the annual Pennsylvania 4-H Horse Show all day Friday and Saturday morning. Still other horses will figure in the exposition as part of the World Championship Rodeo that has been booked for five performances, Wednesday night through Saturday night with a matinee Saturday afternoon.

State Agriculture Secretary Leland H. Bull pointed out that while all of the horses will be of the pleasure type, many of them serve a double role on the farm where frequently they perform light work and find saddle use for business. He said the exposition will be free and open to the public.

● Shipping Fever

(Continued from Page 1)

there will be a swelling about the throat. If respiration becomes obstructed, breathing will be difficult and rapid If the animal is going to die, it will usually do so within 24 hours.

Stress seems to supply the triggering action for this disease This is evident from observations of many cases of weakened or mishandled animals being the first in a herd to contract shipping fever. Shipping itself is a stress which lowers the animals natural resistance and opens the way for disease to move in. There are also other important stresses, such as exposure to wet, chilly weather or sudden changes in temperatures; overcrowding, poorly ventilated and drafty housing, long and irregular intervals between feeding and watering, etc.

Aside from avoiding the mismanagements mentioned above, there are other precautions which may help avert, or at least soften, the effects of shipping fever When the animals are brought in they should be housed in clean, comfortable, well-bedded quarters, and have plenty of fresh, clean water Feed them lightly at first. Some steer feeders have had success in helping their animals make the change from a nearly 100 per cent roughage diet to one composed of grain by starting them off with a few pounds of a special daily booster feed which is high in vitamins and minerals.

Some others have used a feed containing an antibiotic The object of any of these approaches is to get some quick nutrition into the animals and thus help them bridge the physical slump that often accompanies such a complete change in environment

During the first few days in the feedlot the operator should watch his animals closely If they go off-feed, become listless, develop a temperature, or begin to breathe faster than normal he should call his veterinarian without delay. Treatment may or may not be necessary, but when disease starts working time is of the utmost importance.

4-H Clubs build better citizens through leadership, service and achievement Ask the county extension agent how to get into 4-H work.

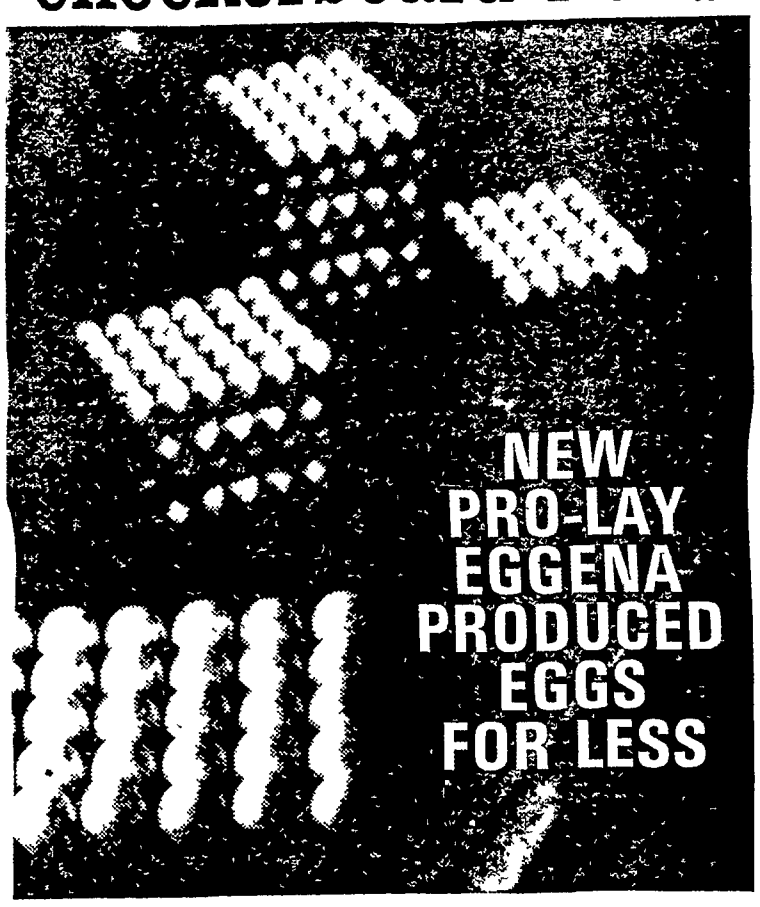
Checkerboard News



New Purina Pro-Lay Eggena offers savings of up to $1.00 per ton in comparison with regular Eggena. In addition, Least-Cost Performance Chows produced eleven extra cases of eggs per 1000 hens. These results are based on 5 years of tests with light-breed commercial layers at the Purina Research Farm.

Combined with new Purina Least-Cost Performance starting and growing Chows the Purina Pro-Lay program saves just under 1¢ per dozen eggs produced. This new Chow is available now. Let us go over the facts with you today.

15 Judges Named For Pa. Livestock Exposition

Fifteen livestock experts have been named department superintendents for the eighth Pennsylvania Livestock Exposition Nov 9-14 in the State Farm Show Building, State Secretary of Agriculture Leland H Bull said Wednesday

All are from the Pennsylvania State University By department, they are Feeder calves Ben Morgan, general chairman of the exposition, Beef breeding cattle, Herman R Purdy and P Jack Phillips, Jr, Open class steers, Glenn R Kean

Breeding sheep, Francis Kreuzberger Market lambs, Lester A Burdette Breeding swine, Dwight E Younkin, Market barrows, Larry Gobble, Carcass show, Kean and Grant Sherritt

Purebred Arabian horses, Thomas L Merritt and Jesse Darlington, Pennsylvania State 4-H Horse Show Tom King, Intercollegiate and Junior judging contest, Phillips and Carroll L Howes

Harold R McCulloch, exposition manager, said judging of carcass class swine on foot has been moved up one day, to Sunday afternoon, Nov 8, to expedite the processing of these animals and to get earlier on-rail placings

The same afternoon, during the on-foot judging, all persons interested in swine production will have opportunity to compete in a live hog evaluation contest for which the Pennsylvania Livestock and Allied Industries Association has provided $250 in cash prizes

The ringside spectator judges will be grouped into two classes — over 21 years of age and under 21 Those who come nearest to the official on-rail placings will be declared the winners

A horse show and the final two of five rodeo performances the following Saturday will wind up the week-long program Judging beef cattle, swine and sheep will feature the main show Monday through Thursday The show and parking are free

1964 Feed Grain Exports Set Record

American farmers supplied world markets with an all-time record 161 million metric tons of feed grains in the fiscal year that ended June 30—more than half of all world trade in coarse grain sorghums, oats and barley Exports of feed grains were up 5 per cent over the record set a year earlier, rising to a new high of $850 million

"Last year, an average of one 10,000 ton shipload of U S feed grains set sail every six hours for foreign ports," the Secretary of Agriculture reported "Everytime one of these ships left American harbors, it represented another half million dollars in feed grain sales within the American economy, creating jobs and payrolls in farming, in transportation, in processing, in financing and in the many other fields of business which service trade and make it flow"

Much of these substantially larger exports of feed grains are accounted for by the rapidly developing poultry and livestock industries in major foreign markets in response to rising incomes and increased consumer demand for meat, milk and eggs Department officials credit an active overseas market promotion program for much of the success in establishing new export records for feed grains in dollar markets which account for 88 per cent of total feed grain exports

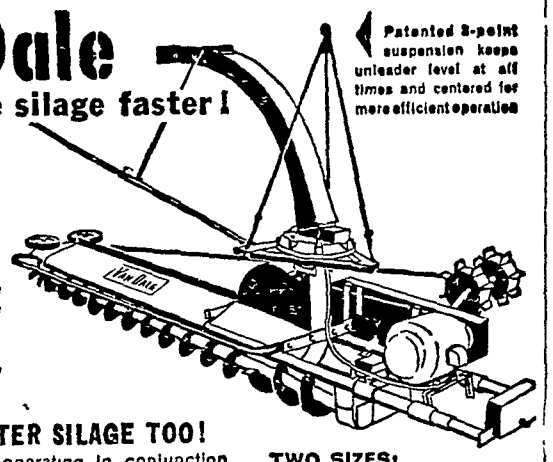
Market promotion of U.S. feed grains is carried out jointly by the U S Department of Agriculture and the U S. Feed Grains Council, an organization representing U S. grain farmers and the grain trade With foreign offices in Rome, Rotterdam, London, Bogota, Tokyo, Hamburg, Madrid and Athens, the U S Feed Grains Council carries out an intensive market promotion program in all major foreign markets. Programs include feeding trials and demonstration; technical advice on feeds and feeding; marketing assistance; marketing studies; exhibits at trade fairs; exchanges of industry and government officials, and the sponsoring of symposiums and seminars

When it comes to giving, some people stop at nothing

Get the BIG silo unloader value!

VanDale

Delivers more silage faster!



Patented 3-point suspension keeps unloader level at all times and centered for more efficient operation

- Double auger system digs the silage faster and more evenly under all conditions whether silage is frozen, wet, or dry.
- Exclusive, adjustable drive hub gives more positive traction, keeps the machine operating evenly, and requires less power.

DELIVERS BETTER SILAGE TOO!

The double augers, operating *in conjunction* with the patented V-paddle impellers, *digs* the silage, mixes it thoroughly, and then *throws* it down the chute. Your cows and cattle get good, palatable silage . . . not a powdered mash as so often happens with unloaders using blowers.

TWO SIZES:
Standard—for silos 10' to 16'
Heavy Duty—for silos 18' to 30'

Chop-All Ever-Sharp Knives

STAY SHARP ALL SEASON

Ever-Sharp knives that hold a razor edge all season! New cutter bar that holds a sharp edge up to 20 times longer than ordinary bars! Both features are standard with all Gehl Chop-Alls to give you a full season of short-cut, non-stop chopping . . . from the first load of hay to the last load of corn.

The new Gehl knives are chrome-edged to stay sharp, chop clean, to give you short-chopped feed The new cutter bar is faced with tungsten carbide, the same material used to cut or drill steel. Together, the two give you trouble-free chopping and a short, fine, uniform cut — best for feed, best for storage.

GEHL More than a century of service

HERE'S PROOF! At the Farm Progress Show, it was proved that you can get up to 28% more silage in your silo with Gehl's short cut.

Make us Prove it with a Demonstration!

Extension Asks Poultrymen To Assist FDA

In a recent newsletter the Poultry and Entomology Extension Departments of Penn State University pointed out the growing concern of the Food and Drug Administration (FDA) over the potential hazard of feed additives, pesticides or any chemical compounds used in agriculture getting into human food channels.

The FDA is in the process of assembling a set of manufacturing rules for the feed industry that will help inspectors They propose to call them "Good Manufacturing Practices" These regulations will serve as inspection guidelines for possible tolerances. The main objective is to prevent the public food supply from being contaminated with drugs and/or various chemical compounds used in the production of meat, milk and eggs.

Every precaution is being and will be taken to prevent the misuse of feed additives and the contamination of non-medicated feeds. Very precise procedures are outlined concerning farm usage, manufacturing, storage and distribution of these feeds. For example, certain drugs are to be removed from the feed a specified number of days before the birds are sold. Entire lots of birds can be seized and condemned if this is not done.

If you are personally interested, a letter explaining each section and a copy of the bill as published in the Federal Register can be obtained from Donald W. Parke, Pennsylvania Millers and Feed Dealers Association, P.O. Box 329, Ephrata, Pa.

The poultry industry has a moral obligation to produce as wholesome a product as possible, free from chemical contamination for public consumption. FDA, as a "watchdog" agency, is in the driver's seat and is determined to do a good policing job.

Therefore, make a quick, thorough check on which drugs, feed additives and pesticides are currently on your farm and determine whether they are being used according to FDA and manufacturer's directions. New procedures are now available which can detect a presence of parts per billion of many chemical compounds. There is a zero tolerance for most of these compounds in meat and eggs. Do yourself a favor and don't be careless with these chemicals The law has changed on certain compounds; so if you are in doubt, contact your local Extension Office.

Recommended and approved pesticides now being used are Malathion, Coumaphos (Co-ral) and Carbaryl (Sevin). Malathion and Co-ral are "safe" to use directly on the birds, in the nests and on the litter and roosts. Co-ral should not be used more often than once a week or within ten days of a stress period. Sevin can be used either directly on the birds or on the litter and roosts Always cover feeders and waterers when spraying

DO NOT USE chemical pesticides unless approved for the specific use intended. Materials which have been carried over from the previous year or have been on hand over six months may not be legal or the approved application may have changed during this period. Always read labels each time the materials are purchased and check the most recent lebals the supplier has on hand for any changes in usage. For this reason, a long list of chemicals which are presently approved will not be included.

DO read labels and feed tags and don't take their warnings lightly because FDA is playing for keeps and will not tolerate any possible situation which may jeopardize the public health

1. Rely on label information which is not more than six months old.

2 Destroy all chemical pesticide containers and never place chemical pesticides in unmarked containers

3 Store chemical pesticides in a safe place away from the reach of children (preferably a locked cabinet).

4. Avoid freezing of chemical pesticides which are liquid because of the separation that can occur.

5 Always avoid skin contact with chemical pesticides and wash carefully after using these materials.

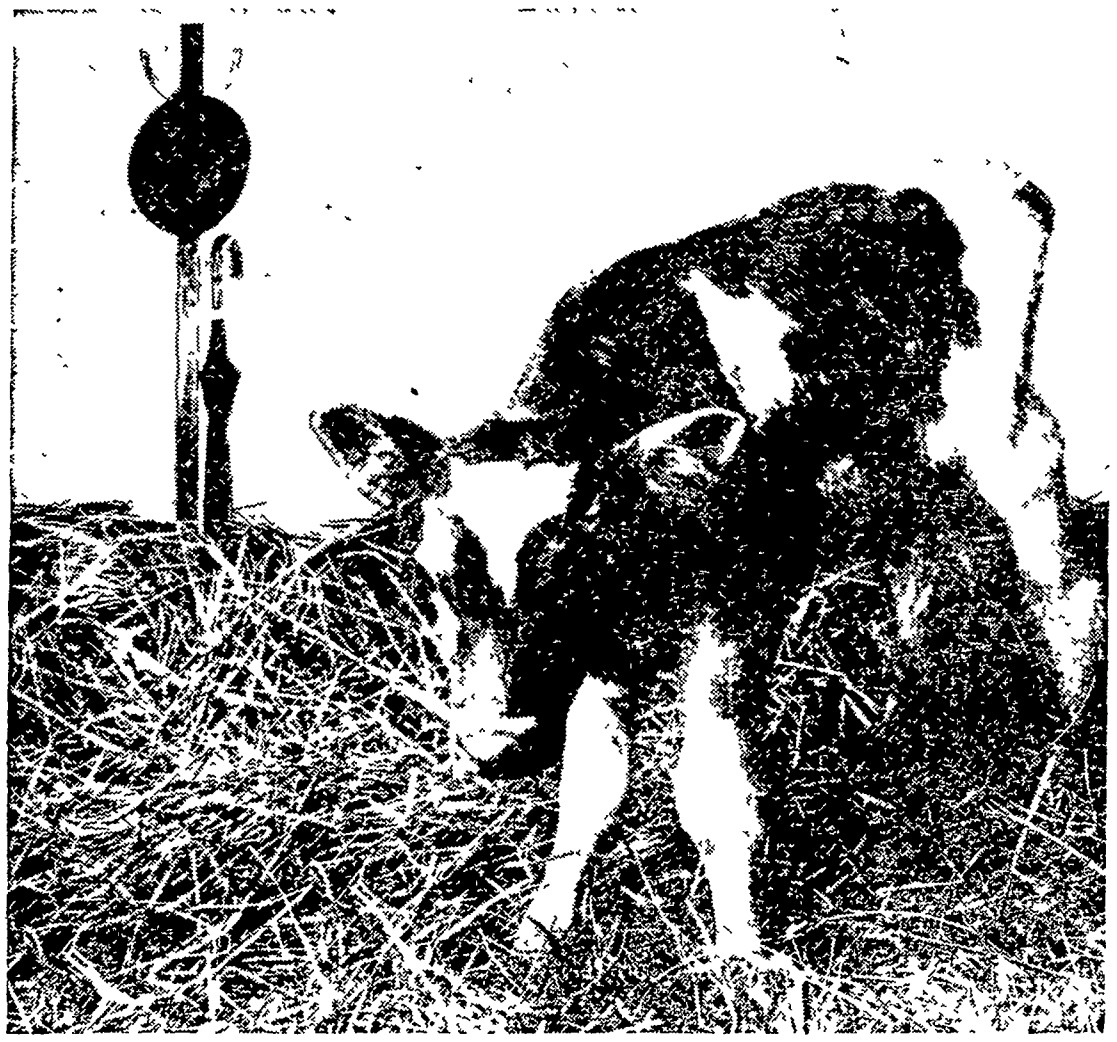
1800 calves.

Sale sponsored by W. Va. Dept. of Agriculture and South Branch Stockyards, Inc., Moorefield, West Virginia



She'll Be A Banker When She Grows Up

Most calves simply grow up to be cows. Some grow up to be a sure source of steady, extra income as well. It all depends upon how you feed them. The Pioneer Feeding Program can make the profitable difference. The capacity to handle maximum feed and produce more milk is determined early in your cows' lives, during the calf and heifer stage. Thus, a fruitful feeding program must be designed to meet all the nutritional requirements of growing cattle and to insure efficient production when they join the milking herd.

Dairymen who employ the Pioneer Feeding Program find that it is not only reasonable in cost, but sets the stage for realizing the full production potential of the cow. Tomorrow's milking herd is in your calf barn right now, and today is the best time to establish a feeding program that will mean to help you set one up, as we have helped more milk per cow per year. We would like many of your friends and neighbors in this community. Call us or stop in. Your calves, too, can be bankers when they grow up.

NEW FILM — PRESCRIPTION FOR SAFETY

"Prescription for Safety," a new film dealing with safe handling of agricultural pesticides, is being released by California Chemical Company as part of the chemical industry's continuing program to emphasize the need to follow precautions found on product labels

The motion picture is slated for release to grower groups, agricultural extension agents, farm associates, and farm youth organizations

A non-commercial concept, the film features "Brand X" chemicals According to L F. Czufin, Calchem's Manager of Advertising & Public Relations, any agricultural chemical company can adapt this safety film for their use and distribution by adding a film "leader" and "trailer" containing their firms introduction and signature. The movie has already been shown to member companies of the National Agricultural Chemicals Association and prints are being made available at cost," Czufin says.

Stressing common sense practices, the 18-minute film follows a farmer through a workday made safe by the proper mixing, applying, and storing of pesticides. Destruction of chemical containers, hygienic care and protective clothing are among the subjects treated. It also depicts the helpful role pesticides play in the production of quality, high-yield crops.

Ingraham Productions of San Francisco produced the motion picture which may be obtained on free loan by writing L. F. Czufin, California Chemical Company, 200 Bush Street, San Francisco 20, Calif.

Urban, suburban and rural boys work together in 4-H Clubs They have a choice of nearly 50 projects ranging from electricity to livestock.

At the heart of the 4-H Club program are some 400,000 men and women who serve voluntarily as leaders.
